

Mehwish Tariq

BS Student - 7th Semester

Skills: Python, Pandas, NumPy, Scikit-learn, Git, GitHub, SQL

Loan Default Prediction System.

Using Python and Pandas, worked with approximately 8000 records, inspected missing values and class imbalance, encoded categorical variables and performed feature selection.

Worked with approximately 8000 records, inspected missing values and class imbalance, encoded categorical variables and performed feature selection.

Compared Logistic Regression, Decision Tree and Random Forest using a train-test split.

Evaluated models using precision, recall, F1-score and ROC-AUC. Recall was prioritized because false negatives were more costly for the problem.

Published the project to GitHub with a detailed README.
